Portfolio: <https://vitoralves.github.io/portifolio/>

Udemy Instructor: <https://www.udemy.com/user/vitor-diogo-alves/>

OCCUPATION

Fullstack Software Engineer

EDUCATION

College Degree, completed in 2016 – Information Systems – UniFacef.

High School, completed in 2012 – COC/Franca.

PROFESSIONAL SUMMARY

Senior Fullstack Software Engineer with 9+ years of experience building scalable platforms, designing microservices architectures, and modernizing legacy systems for large-scale organizations. Proven expertise in leveraging AI-augmented development workflows (Cursor, AI Agents) to dramatically accelerate delivery velocity. Highly skilled in end-to-end development, from creating complex React/TypeScript frontends and FastAPI backends, to managing robust Postgres and Redis databases used by large-scale organizations.

WORK HISTORY

Jan 2026/present - Fullstack Labs / Domo

- Accelerated the migration of a legacy VB-based vehicle inspection platform across multiple U.S. states to a modern React and TypeScript architecture by deeply integrating Cursor and autonomous AI agents into the development lifecycle.
- Engineered a comprehensive library of custom AI "skills" (markdown-based architectural prompts) to standardize and automate the generation of complex UI components, state management, and Redux workflows, ensuring team-wide architectural consistency.
- Increased development velocity by utilizing AI to rapidly implement complex, multi-tenant frontend requirements, including automated form validation, dependent dropdowns, and responsive grid layouts within a shared monolithic repository.
- Collaborated in a cross-functional Agile team, championing AI-assisted unit testing with Jest and React Testing Library to ensure high reliability while maintaining a rapid release cadence.

Jan 2022/Dec 2025 - Fullstack Labs / Uber (San Francisco/California)

- Spearheaded an AI-assisted DSL generation feature for an internal integration platform used by ~200 Uber employees. Empowered non-developers (HR, Finance) to create complex data-parsing integration workflows via natural language prompts, eliminating engineering bottlenecks.
- Sole frontend engineer responsible for modernizing the Medley platform, refactoring legacy components into a component-driven React Hooks architecture.
- Developed "Override," a feature enabling JSON-driven UI generation that allowed internal teams to rapidly build applications through configuration rather than manual implementation.
- Implemented and maintained backend Java/Spring Boot integrations supporting ~1500 concurrent routes across the Uber ecosystem.

May 2019/Jan 2022 - Luizalabs.

- Architected the migration of a legacy Ruby on Rails monolith to a highly scalable, event-driven microservices architecture utilizing Python (Flask) and Google Pub/Sub.
- Engineered and deployed robust, containerized full-stack services (React, Python) to Kubernetes clusters via automated GitLab CI/CD pipelines.
- Established stringent testing standards across the team (Jest, Pytest), achieving ~80% coverage and significantly reducing regressions across critical supply chain workflows.

Oct 2015/May 2019 – Eddydata Tecnologia e Gestão.

- Spearheaded the architectural evolution of a comprehensive college management platform, transitioning legacy data management modules into modern Java Spring Boot services.
- Developed a cross-platform mobile application (Ionic) and responsive administrative interfaces (Angular), demonstrating early adaptability in adopting modern frameworks to solve complex business needs.

TECHNICAL SKILLS

AI & Workflow: Cursor, AI Agents, Prompt Engineering, LLM Integration | *Languages:* TypeScript, JavaScript, Python, Java, SQL, Dart | *Frontend & Mobile:* React, Angular, Flutter, Ionic | *Backend:* Spring Boot, Flask, FastAPI, Microservices | *Infrastructure:* Kubernetes, Docker, Google Pub/Sub, GitLab CI/CD.

Teaching & Content Creation

Udemy instructor with three published software engineering courses covering backend and mobile development, demonstrating a proven ability to break down and communicate complex technical concepts (<https://www.udemy.com/user/vitor-diogo-alves/>).
